Manufacturing

Quality control and testing

Clinical use

For twenty five years we have been supplying a wide range of quality respiratory products to hospitals all over the world.

We believe the best way to maintain the highest standards in design, manufacture, quality and customer care is to have complete control of these aspects of our business. This integrated in-house philosophy means we can continue to provide products that consistently meet the demands of changing clinical practice and user requirements.

All products are designed and manufactured to meet the requirements of relevant BS, ISO and EN standards. Compliance with ISO 9001: 2000, ISO 13485 and Annex II of the Medical Devices Directive allows CE marking of all of our products. This enables Intersurgical products to be traded throughout Europe and the world without restriction.

We are committed to lowering the environmental impact of our products and services and have implemented an Environmental Management System which has been certified to the international standard ISO 14001.

We are committed to providing the most comprehensive range of respiratory products offering our customers **quality, innovation and choice.**

Airway management

A full range of airway management devices from the Y-piece connection of the breathing system to the patient airway

Laryngeal mask airways ▪ i-gel™ supraglottic airway ▪ Guedel airways ▪ Patient connections ▪ HME and filtration products
